

BLISTER ELEC. INOX 2,5mm 10 uds.

Ref.05974

🔍 The Solter Stainless Steel Electrode (Ø2.5 mm | 10 pcs) is the ideal choice for MMA welding of 316L stainless steels. It ensures a strong, stable, and corrosion-resistant joint, even in demanding environments. Its blister packaging guarantees optimal preservation and makes storage easy. Compliant with the most stringent standards, it is perfect for sectors such as food, chemical, or naval industries. Ready for clean and long-lasting welds? Trust Solter quality!

Key Features:

- 🔍 For MMA welding with E316L: This electrode is specifically designed for manual arc welding of 316L stainless steels, ensuring excellent corrosion resistance and arc stability.
- 🔍 2.5 mm Diameter – Blister pack of 10 units: Ideal for more demanding and deeper welds, allowing efficient penetration with a high-quality bead.
- 🔍 High performance and safety: Manufactured under strict standards, its coating minimizes oxide formation and ensures smooth, continuous ignition.
- 🔍 Durability and protection: The blister packaging makes transport easy and prevents degradation from moisture or handling, preserving its technical properties.
- 🔍 Versatile application: Suitable for welding tanks, stainless steel structures, chemical processing equipment, or industrial kitchen utensils.
- 🔍 At Solter, we design every accessory with the professional in mind—those who demand consistent performance, corrosion protection, and ease of use. Because a great weld starts with a great electrode.
