

OVEN ELECTRODES

Ref. 06097

❓ The **Solter ELECTRODE OVEN** is not just a technical device, it's **your quality insurance** for every weld bead in your projects. Avoid the invisible porosity that ruins a perfect job and ensure every electrode is **dry and ready**, just as it should be. Its **analog thermal control, capacity for 10 kg of electrodes**, and **sheet metal structure** not only provide durability but also the peace of mind that every weld will be defect-free. When excellence is your signature, you only trust Solter.

Your work speaks for you. At Solter, we know that every weld is your professional signature, which is why we provide you with the tools to let your quality speak for itself.

Ready to take your precision to the next level?

Main Features:

- ❓ **Reliable Quality:** Prevent porosity, cracks, and invisible defects caused by moisture in the electrodes. Every dry electrode means a safe weld.
- ❓ **Absolute Peace of Mind in Every Weld:** With its analog thermostat, you can set the perfect temperature between **50°C and 150°C**, adapting to every electrode and every job.
- ❓ **Tangible Reliability:** Its **blue painted sheet metal** structure delivers strength and durability. A piece of equipment designed to work with you, not against you.
- ❓ **Always Ready, Always Within Reach:** With a capacity for **10 kg of electrodes up to 450 mm**, you'll have everything you need ready for every project.
- ❓ **Portable Design for Professionals on the Move:** With its dimensions of **23 x 18.5 x 69.5 cm** and a weight of **4.3 kg**, you can easily carry it from the workshop to the job site without hassle.
- ❓ **Efficient and Safe Power:** Operates at **230V**, seamlessly adapting to any standard installation.
- ❓ **An Investment, Not an Expense:** Protect your electrode investment and avoid costly rework, ensuring every weld is perfect the first time.
- ❓ **Solter Guarantee:** Technology, quality, and after-sales service from a brand with decades of experience supporting the best welders.
- ❓ When your reputation depends on every weld bead, there's no room for anything less than perfection. Trust Solter and make every electrode count.
