COURTAIN 1800 x 1400 RED

Ref. 10076

The Red Welding Curtain 1800 x 1400 from Solter is the ideal solution to ensure safety in welding environments. Made of high-resistance PVC with a thickness of 0.35 mm, it provides effective protection against radiation from ultraviolet (UV) to infrared (IR), preventing eye and skin damage. Additionally, it is self-extinguishing and combustion-resistant, ensuring maximum safety in the workplace. It complies with UNE-EN ISO 25980:2015 and EN 1598 standards, offering effective isolation from other workstations. Enhance safety in your workshop with Solter quality!

Main Features:

☑ Risk of eye and skin damage from UV and IR radiation: The curtain filters intense light from the UV to the IR spectrum, reducing its impact on vision and preventing skin burns.

Incandescent projections that can cause fires or injuries: Its selfextinguishing and combustion-resistant material minimizes the risk of accidents caused by sparks.

② Work environments with distractions and lack of visual delimitation: Its design allows for creating safe and visible barriers, separating welding areas from the rest of the workshop.

☑ High-resistance and durable material: Made of 0.35 mm PVC, this curtain ensures a long lifespan, withstanding continuous use without losing its protective properties.

② Difficulty in installation and adaptation to different spaces: With dimensions of 1800x1400 mm, it is easily mounted on standard structures, allowing for quick adjustment according to the operator's needs.

② With Solter, you ensure a safer, more efficient welding environment that complies with international standards.
