

# ADAPTER 10/25 TO 35/50 2u

Ref. 10404

**10-25 to 35-50 Adapter (2 pcs.)** allows welding cables with large Dinse connectors to be connected to machines that use standard 10-25 sockets. This accessory performs the transition between a **10-25 male connector ( $\approx 9$  mm)** and a **35-50 female connector ( $\approx 13$  mm)**, enabling the use of ground clamps and electrode holders with larger cross-sections on compact inverter machines. Supplied in a **2-unit pack**, it is designed to adapt both poles of the machine. It is useful for workshops using professional accessories or long cables, allowing **35-50 connector cables** to be used on equipment designed for **10-25 sockets**.

## Key Features:

- ✓ **10-25 to 35-50 Dinse adapter** : allows cables with large connectors to be connected to welding machines with standard 10-25 sockets.
- ✓ **10-25 male connector ( $\approx 9$  mm)** : designed for compact and portable inverter machines used in MMA or TIG Lift welding.
- ✓ **35-50 female output ( $\approx 13$  mm)** : compatible with larger cross-section cables used in professional ground clamps and electrode holders.
- ✓ **2-unit pack**: allows both connections of the welding machine to be adapted simultaneously.
- ✓ **Compatibility with professional cables** : makes it easy to use accessories with 35-50 connectors on domestic or semi-professional machines.
- ✓ **Quick installation**: direct connection to the machine's Dinse socket without the need to modify cables or terminals.
- ✓ **Use with larger cross-section cables** : useful for jobs with greater distance between the machine and the welding point, reducing voltage drop.
